Q: What is precision medicine?

A: Precision medicine is health care that is based on you as an individual. It takes into account factors like where you live, what you do, and your family health history. Precision medicine's goal is to be able to tell people the best ways to stay healthy. If someone does get sick, precision medicine may help health care teams find the treatment that will work best.

Q: What health information will I need to provide to join the *All of Us* Research Program?

A: If you decide to join *All of Us*, we will ask you to share different kinds of information. We will ask you basic information like your name and where you live. We will ask you questions about your health, family, home, and work. If you have an electronic health record, we may ask for access. We may ask you to go to a local clinic or drug store for a free appointment with us. At this appointment we would measure your weight, height, hips, and

waist, as well as your blood pressure and heart rate. We might ask you to give samples, like blood or urine, at the appointment.

Q: Is participation in the All of Us Research Program a one-time or ongoing activity?

A: Our plan is that *All of Us* will last for at least 10 years. We hope you will stay involved for as long as you can. If you do, researchers may better understand what causes changes in our health and what we can do about it. If you join, you can withdraw at any time for any reason without penalty.

Q: If I am already enrolled in another study, can I still join the All of Us Research Program?

A: You can join *All of Us* even if you are in other health studies. If you are already in a clinical trial, you may want to talk with your health care team before joining *All of Us*. The *All of Us* Research Program is not a clinical trial, so you should still be able to join.

Precision Medicine Initiative, PMI, All of Us, the All of Us logo, and "The Future of Health Begins with You" are service marks of the U.S. Department of Health and Human Services.
